

TECHNOLOGY, TOOLS & SOLUTIONS

SPEAR, A CALIBRE Company provides unique tools and tactics to reduce costs, improve mission effectiveness, optimize business processes, reduce cybersecurity risk, and enhance customer experience. SPEAR offers our clients a portfolio of cutting-edge commercial off-the-shelf (COTS) solutions combined with certified technology experts to guide best-practice architecture, design, implementation, and lifecycle support solutions.

DEEP EXPERTISE

Data Analytics

SPEAR leverages the industry-leading Splunk® machine data analytics platform for real-time operational intelligence to optimize enterprise IT, security, and business performance. We automate the collection, indexing, and transformation of machine data critical to our clients' operations, and apply machine learning for automation and predictive analytics.

IT Modernization Strategies

With keen focus on our clients' mission objectives and information assurance, we develop cost effective strategies to integrate and modernize technology silos for enhanced service delivery. We offer acquisition strategies to leverage working capital funds, leasing, term vs. perpetual licensing, cloud IaaS and SaaS solutions compatible with budget constraints.

Robotics Process Automation

Our rules-based COTS software tools and deployment methodologies provide bots to automate time-consuming, manual input activities. With minimal system integration, Process Robotics reduce backlog, enhance service delivery, and achieve rapid ROI.

Cyber Security

SPEAR's disciplined approaches to manage security and protect critical infrastructure are built on industry-proven insights and tools for in-depth network visibility to identify and remediate priority issues, reduce time for security investigations, automate reporting, and simplify compliance.

DEMONSTRATED IMPACT

GSA: LogIn.Gov

As a prime contractor on GSA's LogIn.Gov Identity-Proofing contract vehicle, SPEAR offers solutions for verification and authentication to expedite real-time decision making, and conducts the right level of authentication based upon the risk of the transactions. We provide access to an unmatched 65B+ collection of public records from >10K sources. LogIn.Gov is a shared service all federal agencies may leverage to provide our diverse US citizen population with secure access (IAL2-compliant) to Federal Government services.

Department of Education: IT Modernization

SPEAR established a Test Lab and testing services to analyze all new or upgraded COTS and GOTS software applications proposed for introduction to the EDUCATE environment. SPEAR leveraged its OEM partnerships and OEM-certified experts to successfully acquire, design, and implement enterprise-wide IT modernization initiatives, and deliver enhanced services and substantial ROI for the Office of Chief Information Officer (OCIO).

Department of Homeland Security: Continuous Diagnostics and Mitigation (CDM) Program

SPEAR's Security & Data Integration Engineers ensured process guides and system-testing procedures were consistently updated to accurately reflect CDM technology upgrades, and ensured full compliance with NIST 800-53 security controls. SPEAR's engineers and SMEs provide integration of Splunk software to all tools across CDM functional areas including: Hardware and Software Asset Management, Configuration Management, Vulnerability Management, managing Trust in Access and security-related behavior.
